Sub topic	Guidance
<p><b>Characters</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> The use of binary codes to represent characters</li> <li><input type="checkbox"/> The term 'character set'</li> <li><input type="checkbox"/> The relationship between the number of bits per character in a character set, and the number of characters which can be represented, e.g.: <ul style="list-style-type: none"> <li>o ASCII</li> <li>o Unicode</li> </ul> </li> </ul> <p><b>Images</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> How an image is represented as a series of pixels, represented in binary</li> <li><input type="checkbox"/> Metadata</li> <li><input type="checkbox"/> The effect of colour depth and resolution on: <ul style="list-style-type: none"> <li>o The quality of the image</li> <li>o The size of an image file</li> </ul> </li> </ul> <p><b>Sound</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> How sound can be sampled and stored in digital form</li> <li><input type="checkbox"/> The effect of sample rate, duration and bit depth on: <ul style="list-style-type: none"> <li>o The playback quality</li> <li>o The size of a sound file</li> </ul> </li> </ul>	<p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ How characters are represented in binary</li> <li>✓ How the number of characters stored is limited by the bits available</li> <li>✓ The differences between and impact of each character set</li> <li>✓ Understand how character sets are logically ordered, e.g. the code for 'B' will be one more than the code for 'A'</li> <li>✓ Binary representation of ASCII in the exam will use 8 bits</li> </ul> <p><b>Not required</b></p> <ul style="list-style-type: none"> <li>✗ Memorisation of character set codes</li> </ul> <p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ Each pixel has a specific colour, represented by a specific code</li> <li>✓ The effect on image size and quality when changing colour depth and resolution</li> <li>✓ Metadata stores additional image information (e.g. height, width, etc.)</li> </ul> <p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ Analogue sounds must be stored in binary</li> <li>✓ Sample rate – measured in Hertz (Hz)</li> <li>✓ Duration – how many seconds of audio the sound file contains</li> <li>✓ Bit depth – number of bits available to store each sample (e.g. 16-bit)</li> </ul>
<p><b>1.2.5 Compression</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> The need for compression</li> <li><input type="checkbox"/> Types of compression: <ul style="list-style-type: none"> <li>o Lossy</li> <li>o Lossless</li> </ul> </li> </ul>	<p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ Common scenarios where compression may be needed</li> <li>✓ Advantages and disadvantages of each type of compression</li> <li>✓ Effects on the file for each type of compression</li> </ul> <p><b>Not required</b></p> <ul style="list-style-type: none"> <li>✗ Ability to carry out specific compression algorithms</li> </ul>
<ul style="list-style-type: none"> <li>• Networks</li> </ul>	

Sub topic	Guidance			
<b>1.3.1 Networks and topologies</b>				
<ul style="list-style-type: none"> <li><input type="checkbox"/> Types of network: <ul style="list-style-type: none"> <li>o LAN (Local Area Network)</li> <li>o WAN (Wide Area Network)</li> </ul> </li> <li><input type="checkbox"/> Factors that affect the performance of networks</li> <li><input type="checkbox"/> The different roles of computers in a client-server and a peer-to-peer network</li> <li><input type="checkbox"/> The hardware needed to connect stand-alone computers into a Local Area Network: <ul style="list-style-type: none"> <li>o Wireless access points</li> <li>o Routers</li> <li>o Switches</li> <li>o NIC (Network Interface Controller/Card)</li> <li>o Transmission media</li> </ul> </li> <li><input type="checkbox"/> The Internet as a worldwide collection of computer networks: <ul style="list-style-type: none"> <li>o DNS (Domain Name Server)</li> <li>o Hosting</li> <li>o The Cloud</li> <li>o Web servers and clients</li> </ul> </li> <li><input type="checkbox"/> Star and Mesh network topologies</li> </ul>	<p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ The characteristics of LANs and WANs including common examples of each</li> <li>✓ Understanding of different factors that can affect the performance of a network, e.g.: <ul style="list-style-type: none"> <li>▪ Number of devices connected</li> <li>▪ Bandwidth</li> </ul> </li> <li>✓ The tasks performed by each piece of hardware</li> <li>✓ The concept of the Internet as a network of computer networks</li> <li>✓ A Domain Name Service (DNS) is made up of multiple Domain Name Servers</li> <li>✓ A DNS's role in the conversion of a URL to an IP address</li> <li>✓ Concept of servers providing services (e.g. Web server → Web pages, File server → file storage/retrieval)</li> <li>✓ Concept of clients requesting/using services from a server</li> <li>✓ The Cloud: remote service provision (e.g. storage, software, processing)</li> <li>✓ Advantages and disadvantages of the Cloud</li> <li>✓ Advantages and disadvantages of the Star and Mesh topologies</li> <li>✓ Apply understanding of networks to a given scenario</li> </ul>			
<b>1.3.2 Wired and wireless networks, protocols and layers</b>				
<ul style="list-style-type: none"> <li><input type="checkbox"/> Modes of connection: <ul style="list-style-type: none"> <li>o Wired <ul style="list-style-type: none"> <li>• Ethernet</li> </ul> </li> <li>o Wireless <ul style="list-style-type: none"> <li>• Wi-Fi</li> <li>• Bluetooth</li> </ul> </li> </ul> </li> <li><input type="checkbox"/> Encryption</li> <li><input type="checkbox"/> IP addressing and MAC addressing</li> <li><input type="checkbox"/> Standards</li> <li><input type="checkbox"/> Common protocols including: <ul style="list-style-type: none"> <li>o TCP/IP (Transmission Control Protocol/Internet Protocol)</li> <li>o HTTP (Hyper Text Transfer Protocol)</li> <li>o HTTPS (Hyper Text Transfer Protocol Secure)</li> <li>o FTP (File Transfer Protocol)</li> <li>o POP (Post Office Protocol)</li> <li>o IMAP (Internet Message Access Protocol)</li> <li>o SMTP (Simple Mail Transfer Protocol)</li> </ul> </li> <li><input type="checkbox"/> The concept of layers</li> </ul>	<p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ Compare benefits and drawbacks of wired versus wireless connection</li> <li>✓ Recommend one or more connections for a given scenario</li> <li>✓ The principle of encryption to secure data across network connections</li> <li>✓ IP addressing and the format of an IP address (IPv4 and IPv6)</li> <li>✓ A MAC address is assigned to devices; its use within a network</li> <li>✓ The principle of a standard to provide rules for areas of computing</li> <li>✓ Standards allows hardware/software to interact across different manufacturers/producers</li> <li>✓ The principle of a (communication) protocol as a set of rules for transferring data</li> <li>✓ That different types of protocols are used for different purposes</li> <li>✓ The basic principles of each protocol i.e. its purpose and key features</li> <li>✓ How layers are used in protocols, and the benefits of using layers; for a teaching example, please refer to the 4-layer TCP/IP model</li> </ul> <p><b>Not required</b></p> <ul style="list-style-type: none"> <li>✗ Understand how Ethernet, Wi-Fi and Bluetooth protocols work</li> <li>✗ Understand differences between static and dynamic, or public and private IP addresses</li> <li>✗ Knowledge of individual standards</li> <li>✗ Knowledge of the names and function of each TCP/IP layer</li> </ul>			

**Start with the topics below to revise for paper 1**

- Understanding the different units of data and being able to convert between them
- Converting between denary, binary and hexadecimal numbers
- Performing binary additions and the problems that it can cause
- Performing binary shifts and explaining their effects on the original data
- Naming different character sets and understanding the difference between them
- Understanding the properties of bitmaps (resolution, colour depth and how they link to file size)
- Being able to explain metadata and give some examples
- Understanding the properties of sound files (sampling frequency, duration and bit depth)
- Being able to draw a network topology with different devices
- Describing the role of different hardware that is being used in local and wide area networks
- Being able to name and identify factors that could affect the performance of a network
- Understanding protocols and giving examples for different situations
- Understanding how cloud computing can affect a user
  
- Revision topics for mock paper 2 (from the spec)
  
- Every component 2 topic

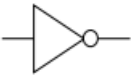

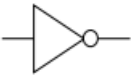

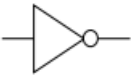

Sub topic	Guidance												
<b>2.1.1 Computational thinking</b>													
<input type="checkbox"/> Principles of computational thinking: <ul style="list-style-type: none"> <li>○ Abstraction</li> <li>○ Decomposition</li> <li>○ Algorithmic thinking</li> </ul>	<b>Required</b> <ul style="list-style-type: none"> <li>✓ Understanding of these principles and how they are used to define and refine problems</li> </ul>												
<b>2.1.2 Designing, creating and refining algorithms</b>													
<input type="checkbox"/> Identify the inputs, processes, and outputs for a problem <input type="checkbox"/> Structure diagrams <input type="checkbox"/> Create, interpret, correct, complete, and refine algorithms using: <ul style="list-style-type: none"> <li>○ Pseudocode</li> <li>○ Flowcharts</li> <li>○ Reference language/high-level programming language</li> </ul> <input type="checkbox"/> Identify common errors <input type="checkbox"/> Trace tables	<b>Required</b> <ul style="list-style-type: none"> <li>✓ Produce simple diagrams to show: <ul style="list-style-type: none"> <li>▪ The structure of a problem</li> <li>▪ Subsections and their links to other subsections</li> </ul> </li> <li>✓ Complete, write or refine an algorithm using the techniques listed</li> <li>✓ Identify syntax/logic errors in code and suggest fixes</li> <li>✓ Create and use trace tables to follow an algorithm</li> </ul> <p><b>Flowchart symbols</b></p> <table border="1" data-bbox="987 671 1547 906"> <tbody> <tr> <td data-bbox="987 671 1155 746"></td> <td data-bbox="1155 671 1261 746">Line</td> <td data-bbox="1261 671 1429 746"></td> <td data-bbox="1429 671 1547 746">Input/Output</td> </tr> <tr> <td data-bbox="987 746 1155 821"></td> <td data-bbox="1155 746 1261 821">Process</td> <td data-bbox="1261 746 1429 821"></td> <td data-bbox="1429 746 1547 821">Decision</td> </tr> <tr> <td data-bbox="987 821 1155 906"></td> <td data-bbox="1155 821 1261 906">Sub program</td> <td data-bbox="1261 821 1429 906"></td> <td data-bbox="1429 821 1547 906">Terminal</td> </tr> </tbody> </table>		Line		Input/Output		Process		Decision		Sub program		Terminal

<b>2.5.1 Languages</b>	
<input type="checkbox"/> Characteristics and purpose of different levels of programming language: <ul style="list-style-type: none"> <li>○ High-level languages</li> <li>○ Low-level languages</li> </ul> <input type="checkbox"/> The purpose of translators <input type="checkbox"/> The characteristics of a compiler and an interpreter	<p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ The differences between high- and low-level programming languages</li> <li>✓ The need for translators</li> <li>✓ The differences, benefits and drawbacks of using a compiler or an interpreter</li> </ul> <p><b>Not required</b></p> <ul style="list-style-type: none"> <li>✗ Understanding of assemblers</li> </ul>
<b>2.5.2 The Integrated Development Environment (IDE)</b>	
<input type="checkbox"/> Common tools and facilities available in an Integrated Development Environment (IDE): <ul style="list-style-type: none"> <li>○ Editors</li> <li>○ Error diagnostics</li> <li>○ Run-time environment</li> <li>○ Translators</li> </ul>	<p><b>Required</b></p> <ul style="list-style-type: none"> <li>✓ Knowledge of the tools that an IDE provides</li> <li>✓ How each of the tools and facilities listed can be used to help a programmer develop a program</li> <li>✓ Practical experience of using a range of these tools within at least one IDE</li> </ul>

**Start with the topics below to revise for paper 2**

- Understanding the differences between programming language
- Naming IDE tools and their usefulness
- Understanding how structure diagrams can be used to show decomposition
- Identifying different types of errors and correcting them (logic and syntax)
- Being able to apply a searching algorithm (linear and binary)
- Being able to understand and apply different computational thinking algorithms (abstraction, decomposition and logical thinking)
- Being able to apply and explain either authentication or validation
- Understanding the difference between iterative and final testing
- Being able to get user input and storing them into different variables
- Being able to output variables with text
- Knowing how to apply SQL commands
- Being able to follow a flowchart along different paths
- Being able to write simple conditional statements

	• Identifying variables and completing array pseudocode
